LYNGSOE SORTER CONTROLLER™

TAKE CONTROL OF YOUR SORTING STRATEGIES WITH LYNGSOE SORTER CONTROLLER™

EASY ADJUSTMENT OF SORT TABLES

The Sorter Controller is an intuitive web-based software, which enables libraries to independently establish and flexibly adjust sorting strategies (sort tables) for the Lyngsoe Sort Mate™ 2000 AMH sorters.

INSIGHTS FOR OPTIMIZATION

The Sorter Controller offers overview statistics to support the optimal usage of the available inductions and destinations; as well as search functionalities for insights and nearly full/early warning to support the flow of your operational processes.

SWITCH FOR FULL CAPACITY USE

Whether on PC or tablet, it is easy to create or adjust sorting strategies. For example switching to a "waterfall" on multiple destinations could utilize capacity to the fullest, when large numbers of materials are returned in the unmanned hours of a holiday period.

BENEFITS
- Take control of your own sorting strategies
- Intuitive, simple user interface
- Optimize your AMH capacity utilization
- Easy handling of large number of materials in unmanned hours
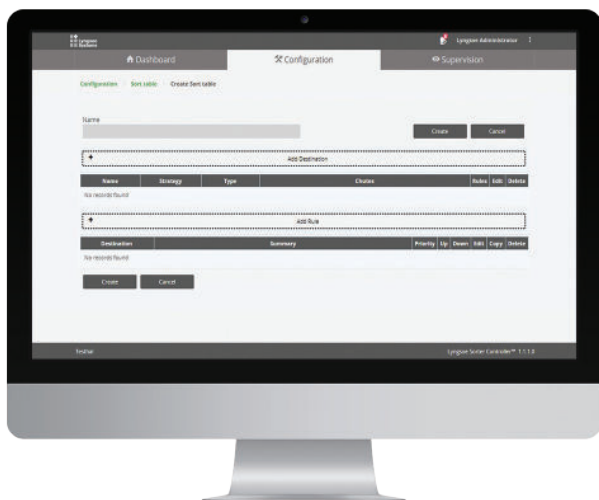

LYNGSOE SORTER CONTROLLER™

DASHBOARD

A visualization of the sorter's metrics and performance indicators based upon items sorted and items inducted.

CREATE SORT TABLE

Overview and activation/deactivation of available sort tables. Creation of new (unlimited) sort tables.

SORT TABLE

Setting up new sort tables is easy and intuitive. Import/export sort tables.
